

Claude vs GPT

X Algorithm Report Comparison

An unbiased side-by-side evaluation of two independently generated reports on the X 'For You' algorithm. Both analyzed the same open-source repository. Scored across 9 dimensions with honest assessment.

Date: May 17, 2026

Disclaimer: This comparison is authored by Claude. The reader should weigh the inherent bias of any model evaluating its own work.

GPT Report	Claude Report	Same Repo	Fair Comparison
4 pages, 16-post thread	7 pages, 20-post thread	x-algorithm (May 2026)	9 dimensions scored

1. Overall Scoring

Each dimension is scored out of 10. Scores reflect what each report actually delivered, not what the model could have done.

Dimension	GPT (/10)	Claude (/10)	Winner
Technical Depth	7	9	Claude
Code-Level Specificity	6	9	Claude
Unique Insights	6	9	Claude
Actionability	8	8	Tie
Accuracy / Honesty	9	8	GPT
PDF Conciseness	9	7	GPT
PDF Comprehensiveness	7	9	Claude
X Thread Shareability	9	7	GPT
Creator Accessibility	9	7	GPT
TOTAL	70	73	Claude (marginal)

Score: Claude 73 vs GPT 70 -- a marginal lead driven by technical depth and code specificity. GPT leads in conciseness, caveats, and tweet-native formatting.

2. Quick Verdict Matrix

If you need...	Use this report
Deep technical understanding of the algorithm	Claude
Code-level evidence to cite in discussions	Claude
A quick executive summary to skim in 5 minutes	GPT
A thread ready to post on X right now	GPT
Complete list of all engagement signals with variable names	Claude
Honest caveats about what the analysis can't claim	GPT
Understanding of Grox classifiers, thresholds, slop detection	Claude
Clean content format guidance (text, threads, video, replies)	GPT
Author diversity formula with worked example	Claude
Advice accessible to non-technical creators	GPT

3. What GPT Covered That Claude Didn't

- Subscriber-only content warning (don't make it your main reach vehicle)
- Explicit 'do not overfit to raw likes' framing as a standalone point
- 'Do-not-amplify style labels' mentioned as a safety category
- Cleaner 'Content Format Notes' section (text, threads, video, replies, topics) as a standalone block
- More thorough and prominent caveats section (4 bullet points about repo limitations)
- Correctly notes: 'No SimClusters, RealGraph, TwHIN, or direct verified-status scoring hooks found'

4. What Claude Covered That GPT Didn't

- Three separate share signals (share, DM share, copy-link share) as distinct scoring paths
- Author diversity decay formula with worked example (1st = 1.0, 2nd = decay, 3rd = decay^2)
- click_dwell_time as a third independent dwell signal
- Negative score offset rescaling formula
- Mutual follow Jaccard similarity via MinHash (256 hashes, specific code reference)
- New user boost mechanism (NEW_USER_OON_WEIGHT_FACTOR, separate inference cluster)
- Hash-based identity (the model doesn't see your username -- it sees embeddings)
- Candidate isolation in transformer attention masking
- Post age bucketing specifics (4800 min max, 60-min granularity, overflow bucket)
- Brand safety tiers (Safe > LowRisk > MediumRisk) and the PTOS_CUTOFF_TWEET_ID
- Grox slop_score detection as a real signal
- Grox classifiers enumerated with specific thresholds (quality < 0.4, reply 0-3 scale)
- Phoenix model architecture details (128 history, 32 candidates, RoPE encoding)
- Code snippet for VQV eligibility check

5. X Thread Comparison

Aspect	GPT (16 posts)	Claude (20 posts)
Post count	16	20
280-char compliant	Yes (designed for it)	No (many posts exceed limit)
Includes code snippets	No	Yes (1 code block)
Tone	Conversational, researcher	Technical, advisor
Unique topics covered	~12	~18
Mentions specific variable names	No	Yes (throughout)
Mentions specific thresholds	Rarely	Frequently (4800 min, 0.4, 256, etc.)
Ready to post as-is	Yes	Needs editing for length
Engagement potential	High (clean, tweetable)	High (more surprising insights)

6. PDF Report Comparison

Aspect	GPT (4 pages)	Claude (7 pages)
Pages	4	7
Tables	4 structured tables	7 structured tables
Cover page	No (starts with content)	Yes (stats + branding)
Pipeline breakdown	6 stages (grouped)	10 stages (granular)
Positive signals listed	Grouped in one row	14 rows, individually named
Negative signals listed	5 risks in table	5 signals with severity ratings
Grox coverage	Mentioned briefly	6-classifier table with thresholds
Strategies	3-row playbook table	8 numbered strategies
Don'ts	7 bullet points	9-row table with severity (CRITICAL/HIGH/MEDIUM)
Technical insights	Not covered	4 insights (isolation, hashing, new user, history)
Caveats	4-point caveat section	Inline mentions only
Page footers	Page numbers only	'Generated by Claude' on every page

7. Final Verdict

Audience / Use Case	Better Report
For technical audience (engineers, growth hackers)	Claude wins
For general creators (just want to know what to do)	GPT wins
For posting on X right now	GPT wins
For deep reference material	Claude wins
For citing in a blog post / article	Claude wins
For executive briefing	GPT wins

Both reports are solid and arrive at the same core conclusions about the X algorithm. Claude goes deeper technically with formulas, variable names, thresholds, and architectural details. GPT is more disciplined editorially -- more concise, better caveats, and a more tweet-native thread. The ideal report would combine Claude's depth with GPT's conciseness.

Score: Claude 73 / GPT 70 out of 90. A marginal Claude lead, not a decisive one. The 3-point gap comes entirely from technical depth and code specificity. GPT compensates with editorial polish and practical shareability.
